20 APR 1970

MEMORANDUM FOR:
Project ASPIN

Per your request, several people in the Center have reviewed your paper on NPIC and the following represent some of the more relevant comments.

1. In general, the paper by itself seems to have little meaning, although perhaps in the context of the total report it takes on some meaning. The figures and conclusions as given don't seem to tell one anything; however, I recognize they may have accomplished the objective you set out to accomplish.
2. Several inaccuracies were noted. For example:
 - a. All previously known information on a given target is not usually to be found in OAK's, IPIR's, etc. (p.10.6)
 - b. Many personal analysts files are maintained at NPIC. (p.10.7)
 - c. The EPDF is not very important to the third phase effort. (p.10.20)
 - d. The Objects Data File or the MIS are not mentioned. (p.10.20)
 - e. Support to the various PSG functions, especially film handling and publication services, is not mentioned. (p.10.22)
 - f. The Center does not have extensive facilities to provide services which can be drawn on by the community... (p.10.1 and 10.2)
 - g. The discussion in section 10.22 and the table on page 10.5 seem backwards.
 - h. The NIETB, as such, has not been developed.
3. Lastly, I feel that when you include numbers on film footages and terms such as "search system" and "spot system," the document should be restricted to TGH channels.
